

6516206050.txt

I am concerned about the welfare of the trucking industry due to the fact that the drivers are not getting up to minute information that is extremely important to the industry standards that are required in a very competitive market. Traffic and weather reports are needed in an up-to-the minute report, due to the fact, that in the major metropolitan areas every second is of the utmost importance. Since I have been contracting my service to receive XM radio I feel it is not only my constant companion on a lonely highway at all hours of day and night but it is a much needed safety companion for my family and MY piece of mind.

My paid service includes an XM radio for my home and one for my daily trips in my company truck.

We are so satisfied to have the opportunity to express our satisfaction with the current format of XM radio that at this time we wish to express our concern for keeping it just the way it is set up to inform the general public of the most timely news and weather that this form of communication can bring to the listening public.

This document is to confirm our dislike and the opposition to house bill HR4026.
